

## Outside clamping tube squaring and bevelling machines type PROTEM® SE-Series

### Technical Features

#### Clamping capacity

SE60: 10 – 60 mm OD ( 3/8" - 2" )

SE90: 25 – 90 mm OD ( 1" - 3" )

SE120: 60 – 120 mm OD ( 2" - 4" )

#### Feed stroke

**Manual with wheel, 15 mm**

The pneumatic or electric powered **SE-Series** end prep tools are lightweight and portable. They will perform repeatable quality weld preps on most metal pipes and tubes including stainless steel, from 10 mm to 120 mm OD. The cutting head will bevel, face and counterbore individually or in a simultaneous operation. The tool-holder plate can hold up to 4 tool blocks.

The plate is easily removable and thus allows the operator to save time once the tool blocks have been adjusted by exchanging the whole plate. The machines of the SE-series are available with either pneumatic or electric drive. They clamp to the pipe by means of a heavy duty collet and thus provide a chatterfree accurate finish

#### Machine is delivered with:

- Pneumatic or electric drive
- Keys and screws
- Operating manual

#### To be ordered separately:

- 1 tool holder plate
- 1 tool insert holder
- Tool inserts

**WITHOUT EXPANSION COLLET!**
